

Mehmet Ünübol

İzmir, Türkiye | mehmetunubol@gmail.com

Full Stack Software Engineer

Full-stack software engineer with 10+ years delivering scalable, secure, and high-performance systems across telecom, automotive, and SaaS. I focus on back-end with Node.js and TypeScript — modernizing legacy systems and leading cloud-native microservices migrations.

Education

- M.Sc., Computer Engineering, Izmir Institute of Technology — 2017 (Incomplete — left after the first year)
- B.Sc., Electronics & Communication Engineering, Izmir Institute of Technology — 2010 — 2015

Technical Skills

Languages: JavaScript / TypeScript, Python, Shell, Perl, Java, C / C++

Backend: Node.js, Express, LoopBack, Spring Boot

Frontend: React, Angular, Next.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, InfluxDB, ClickHouse

DevOps & Cloud: Docker, Kubernetes, Jenkins, GitHub Actions, PM2, Nginx, Google Cloud, AWS, Firebase

Testing & QA: Jest, Mocha, Cypress, Appium, Selenium, JMeter

Architecture: Microservices, Event-Driven, REST / GraphQL, WebSockets, gRPC, CQRS, JWT Auth, Pub/Sub, NATS

Monitoring & Logging: TICK Stack, InfluxDB, Winston, Coralogix

Tools: Git, Jira, Confluence, Bitbucket, Trello, MS Teams, Slack

Professional Experience

BrainRocket — Back End Developer

Remote | Feb 2026 — Present

- Developing backend microservices for new regulatory features, built with Node.js, TypeScript, Kafka, NATS, and ClickHouse.
- Driving individual features end-to-end — requirement gathering, solution design, implementation — in close collaboration with Product Owners and Tech Leads.
- Using Claude for AI-assisted coding to accelerate implementation and improve code quality.

Tech: Node.js, TypeScript, Microservices, Kafka, NATS, ClickHouse, Docker, Kubernetes, MySQL, MongoDB, Redis, Google Cloud, Pub/Sub, Git, Jira, Confluence, Coralogix, Event-Driven, REST / GraphQL

OSF Digital — Full Stack Developer

Remote · Türkiye | 2020 — Jan 2026

- Migrated legacy Perl/C++ APIs to Node.js (LoopBack), cutting maintenance overhead.
- Built a Kafka-based cloud component processing live satellite/terminal data into a time-series DB, Dockerized for deployment.
- Led large-scale performance testing (JMeter, Python, Node.js, Jenkins) with metrics reported via InfluxDB/TICK stack.
- Managed custom Linux/systemd service clustering and monitoring with Python support scripts.
- Ran data simulations across 5 VMs with 60 simulator processes each.

Tech: Node.js, AngularJS, PostgreSQL, Python, Kafka, InfluxDB, JMeter, Docker, Cypress, PM2, Jenkins

Ruut Tech — Full Stack Developer (Freelance)

Remote | 2021 — 2022

- Built Node.js microservices (cron, wallet, screen, IoT, notifications, and more), containerized with Docker.
- Integrated services over gRPC behind an API gateway.
- Deployed the microservice fleet on Kubernetes on Google Cloud.

Tech: Node.js, MongoDB, Docker, gRPC, Kubernetes, Google Cloud

Quadified — Backend Developer (Freelance)

Remote | 2020 — 2021

- Built a device abstraction layer with Appium; automated workflows with Selenium and UIAutomator.
- Automated complex multi-device flows, including call and SMS interactions between devices.
- Developed dashboards for scheduling, listing, and reporting test executions.

Tech: ReactJS, Java, Node.js, Appium, Selenium

Redpine Software — Embedded Software Developer

İzmir, Türkiye | 2019 — 2020

- Delivered ECU-level features and patches for in-vehicle systems.
- Developed C components for Embedded Linux, integrated with Node.js services.

Tech: C, Embedded Linux, Node.js

Depar Teknoloji — Software Engineer

İzmir, Türkiye | Jun 2016 — Apr 2019

- Built C-based telecom modules and Java/Perl web portals for SMS infrastructure.
- Developed a Java/MySQL reporting dashboard with scheduled and spam-detection reports.
- Built a Perl configuration dashboard and a Java release portal automating customer release cycles.

Tech: C, Java, Perl, MySQL, Linux

Aselsan — Intern

İzmir, Türkiye | Jul 2015

Freelance & Personal Projects

- **Petsitter** — Marketplace connecting pet owners with sitters — React frontend, Node.js microservices in a monorepo, Angular admin, and a Go event manager. Deployed on Google Cloud Run with the frontend on Vercel.
- **Weatherugo** — Activity and clothing suggestion platform using weather APIs and AI-powered recommendations (Genkit / Gemini).
- **Employee Management System** — Full-stack MERN application with MSSQL and physical device integration for attendance tracking.
- **Android Test Automation** — Spring Boot + Appium + React platform for automated device testing with multi-device orchestration.
- **E-commerce Platform** — Full-featured Laravel/PHP storefront — products, categories, comments, email tracking, and payments.
- **yt-note-agent** — Pipeline that transcribes a YouTube video (yt-dlp + Whisper), summarizes it with AI, and publishes the result as a categorized post on this site's Blog — diagrams included when relevant.

Certifications & Languages

- Microservices: Asynchronous Messaging
- Microservices: Design Patterns
- Microservices Foundations
- AI Engineering Essentials: Navigating the Tech Revolution
- App Store Marketing Specialist
- English — Professional (B2+)
- Turkish — Native
