Full Stack Software Engineer

Full-stack engineer with **10+ years of experience** delivering scalable, secure, and high-performance solutions across telecom, automotive, SaaS, and web platforms. Proven expertise in **modernizing legacy systems**, leading **cloud-native microservices migrations**, and collaborating in **multicultural agile teams**. Skilled across **backend (Node.js, Java, Perl, Python)**, **frontend (ReactJS, AngularJS)**, **databases**, **test automation**, and **DevOps practices**. Passionate about **clean code**, **system optimization**, and mentoring peers.

Education

Izmir Institute of Technology

- MSc in Computer Engineering (Incomplete), 2017
 - BSc in Electronics and Communication Engineering, 2010 – 2015
-

Technical Skills

Languages: JavaScript/TypeScript, Python, Shell, Perl, Java (legacy), C/C++

Frontend: ReactJS, AngularJS, Next.js (basic)

Backend: Node.js (Express, LoopBack), Spring Boot

Databases: PostgreSQL, MySQL, MongoDB, Redis, Time-series DB (TICK stack, InfluxDB)

Testing & QA: Jest, Mocha, Cypress, Appium, Selenium, JMeter

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, PM2, Nginx

Cloud: AWS (EC2, S3) (basic), Google Cloud, Firebase

Monitoring & Logging: TICK stack, Winston, InfluxDB

Architecture: Microservices, Event-Driven Architecture, REST/GraphQL, WebSockets, JWT auth, CQRS, Pub/Sub

Tools: Git, Jira, Confluence, Bitbucket, Trello, MS Teams, Slack

Professional Experience

OSF Digital — Full Stack Developer

Remote | 2020 – Present

- Migrated **legacy Perl/C++ APIs** to **Node.js (LoopBack)**, reducing maintenance overhead.
- Modernized frontend components with **AngularJS**, improving usability and performance.
- Led **API migration strategy** and coordinated frontend/backend integration.
- Implemented **unit & integration testing frameworks** for QA validation.
- Optimized **cloud resource usage** and tuned **time-series database** performance.
- Performed **live debugging** in customer production environments.
- Managed **custom Linux/systemctl clustering** with support scripts in Python to control and monitor services.
- Worked on a **cloud component using Kafka** to process live data from satellites, terminals, and other systems (beam, site, map, etc.) for API requests and storage in a TSDB. The cloud deployment is **Dockerized**.
- Led **large-scale performance testing** using **JMeter, Python, Node.js, Jenkins**; reported metrics via **InfluxDB/TICK stack**.
- Involved in **data simulator setup** using simple C++ processes that mimic reporting data. Configured challenging workflows with **Python and Shell scripts** to generate configuration files, retrieving data from databases and preparing **opt/json files** with configurable parameters. Managed simulations across **5 VMs with 60 simulator processes each**.

Tech: Node.js, AngularJS, PostgreSQL, Python, Linux, Git, Kafka, JMeter, InfluxDB

Ruut Tech (Startup) — Freelance Full Stack Developer

Remote | 2021 – 2022

- Contributed to the **implementation of features** within an existing IoT microservice architecture for LED screen management dashboards.

- Built **Node.js backend services**, containerized with Docker, deployed on **Google Cloud**.
- Integrated services using **gRPC** for efficient inter-service communication.
- Developed and maintained services including: **cronService, logService, userService, walletService, screenService, cashRegisterService, locationService, notificationService, screenInvestorService, travelService, couponService, iotScreenService, driverService, advertiserService, iotHubService**.
- Deployed microservices on **Kubernetes** with API Gateway and RPC internal communication.

Tech: Node.js, MongoDB, Docker, gRPC, Google Cloud, Kubernetes

Quadified (Telecom Automation) — Freelance Backend Developer

Remote | 2020 – 2021

- Contributed to a **remote automation platform for mobile device testing** in the telecom sector.
- Developed and maintained **two independent services**:
 - **User Interface (ReactJS)**: feature development and bug fixes.
 - **Server (Java backend)**: implemented **device abstraction layer** using **Appium** and automated workflows with **Selenium** and **UIAutomator**.
- Automated complex test flows involving **multiple devices**, including call and SMS interactions between devices.
- Developed **dashboard functionality** for scheduling, listing, and reporting test executions.

Tech: ReactJS, Java, Node.js, Appium, Selenium, UIAutomator

Redpine Software — Embedded Software Developer

Izmir | 2019 – 2020

- Delivered **ECU-level features** and patches for in-vehicle systems.
- Developed **C components** for Embedded Linux environments; integrated with Node.js services.

Tech: C, Embedded Linux, Node.js

Depar Teknoloji — Software Engineer

Izmir | 2015 – 2019

- Built and maintained **C-based telecom modules** and **Java/Perl web portals** for SMS infrastructure.
- Developed **Reporting Dashboard (Java/MySQL)** for telecom SMS traffic with scheduled and spam detection reports.
- Built **Configuration Dashboard (Perl)** to configure and manage telecom device components.
- Implemented **Release Web Portal (Java)** automating customer release cycles, builds, and documentation.
- Enhanced **SMS infrastructure** with performance optimizations and monitoring workflows.

Tech: C, Java, Perl, MySQL, Linux

Freelance & Personal Projects

- **Petsitter Platform** (petsittertr.com)— Marketplace connecting pet owners with pet sitters. Built with **ReactJS frontend**, **Node.js API**, **Angular admin panel**, and microservices consolidated in a **monorepo** for cost efficiency. Modules include **admin, auth, blog, chat, comments, notifications, image service (Google Cloud Storage), Go-based event manager**. Deployed on **Google Cloud Run**; frontend hosted on **Vercel**.
- **Weatherugo** (weatgerugo.com)— Activity & clothing suggestion platform using **weather APIs** and AI-powered recommendations (Genkit/Gemini) (Vibe Coding).
- **Employee Management System** — Full-stack MERN application with **MSSQL** & physical device integration for attendance tracking.
- **Android Test Automation** — **Spring Boot + Appium + ReactJS** for automated device testing with multi-device orchestration.
- **E-commerce Platform (Laravel/PHP)** — Full-featured workflow including **products, categories, comments, email tracking, payments**.

Certifications & Languages

- **English:** Advanced (B2+), Professional working proficiency
- **Turkish:** Native

Summary of Strengths

- Strong **system architecture** and problem-solving skills.
- Experienced across **full SDLC**: requirements, architecture, coding, testing, deployment, monitoring and documentation.
- Comfortable in **Agile (Scrum/Kanban)** teams and mentoring junior developers.
- Skilled in **CI/CD pipelines, observability, and cloud optimization.**

Available immediately | Open to remote or hybrid roles | Willing to relocate if required
